# 1. Introduction

## 1.1 Background

The Department of Defense (DoD) Air Force Continuous Ac-
quisition and Life-Cycle Support (CALS) Test Network (AFCTN)
is conducting tests of the military standard for the Auto-
mated Interchange of Technical Information, MIL-STD-1840A,
and its companion suite of military specifications.  The
AFCTN is a DoD sponsored confederation of voluntary partic-
ipants from industry and government managed by the Elec-
tronic Systems Center (ESC).

The primary objective of the AFCTN is to evaluate the effec-
tiveness of the CALS standards for technical data inter-
change and to demonstrate the technical capabilities and
operational suitability of those standards.  Two general
categories of tests are performed to evaluate the standards;
formal and informal.

Formal tests are large and comprehensive, which follow a
written test plan, require specific authorization from the
DoD, and may take months to prepare, execute, and report.

Informal tests are quick and short, used by the AFCTN tech-
nical staff, to broaden the testing base.  They include
representative samples of the many systems and applications
used by AFCTN participants.  They also allow the AFCTN staff
to gain feedback from many industry and government inter-
pretations of the standards, to increase the base of par-
ticipation in the CALS initiative, and respond to the many
requests for help that come from participants.  Partici-
pants take part voluntarily, benefit by receiving an evalu-
ation of their latest implementation (interpretation) of the
standards, interact with the AFCTN technical staff, gain
experience using the standards, and develop increased
confidence in them.  The results of informal tests are
reported in Quick Short Test Reports (QSTRs) that briefly
summarize the standard(s) tested, the hardware and software
used, the nature of the test, and the results.

## 1.2  Purpose

The purpose of the informal test, reported in this QSTR, was
to analyze Gateway Conversion's interpretation and use of
the CALS standards in transferring technical publication
data.    Gateway Conversion used its CALS Technical Data
Interchange System to produce data, in accordance with the
standards, and delivered it to the AFCTN technical staff on
a 9-track magnetic tape.

# 2. Test Parameters

**Test Plan:**                          AFCTB 93-061

**Date of**
**Evaluation:**                         10 June 1993

**Evaluator:**                          George Elwood
                                        Air Force CALS Test Bed
                                        DET 2 HQ ESC/AV-2P
                                        4027 Colonel Glenn Hwy
                                        Suite 300
                                        Dayton OH  45431-1672

**Data**
**Originator:**                         Suzy Wharam

## 3.  1840A Analysis

## 3.1  External Packaging

The tape arrived at the Air Force CALS Test Bed (AFCTB) enclosed in a box in accordance with ASTM D 3951.  The exterior of the box was marked with a magnetic tape warning label, as required by MIL-STD-1840A, para. 5.3.1.3.

The tape was enclosed in a barrier bag as required by MIL-STD-1840A, para. 5.3.1.2.  Inspection of the tape reel showed the label indicating the recording density, as required by MIL-STD-1840A, para. 5.3.1.  Enclosed in the box was a packing list showing all files recorded on the tape.

## 3.2  Transmission Envelope

The 9-track tape received by the AFCTB contained MIL-STD-1840A files.  The files were named per the standard conventions.

## 3.2.1  Tape Formats

The tape was run through the AFCTN *Tapetool v1.2.9* utility. No errors were encountered while evaluating the contents of the tape labels.

The tape was read using the XSoft *CAPS read1840A* utility without any reported errors.

The tape was read using the TI *Tapetool v1.0.1* without any reported errors.

The physical tape structure meets the CALS MIL-STD-1840A requirements.

### 3.2.2 Declaration and Header Fields

No errors were found in the Document Declaration file and data file headers.

This portion of the tape meets the CALS MIL-STD-1840A requirements.

## 4. IGES Analysis

No Initial Graphics Exchange Specification (IGES) files were included on this tape.

## 5. SGML Analysis

The AFCTB has several parsers available for evaluating submitted DTD and Text files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. These products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings unless specified in the report. Changes to DTD or Text files required by each system are not documented in the report.

The tape contained one Text file and one DTD. All parsers available in the AFCTB reported errors. See the Appendix to this report for the error logs.

The first reported error, from some of the parsers, was typos in the external identifiers. Shown below are the entities which had to be changed.

```
                                        Added here V
<!ENTITY % ISOgrk3 PUBLIC "ISO 8879-1986//ENTITIES Greek Symbols//EN"
                   "/app/sqps/dtds/entities/isogrk3.ent">
<!ENTITY % ISOlat1 PUBLIC "ISO 8879-1986//ENTITIES Laten 1/EN"
                      ▪Added Latin 1/▪ ^^^^^^^^
                   "/app/sqps/dtds/entities/isolat1.ent">
```

Errors in the Text file relate to incorrect definitions for
STEP1, STEP2, and the PARA within those elements.  See the
error logs in the Appendix of this report for specific lo-
cations within the Text file.

The Text file and DTD from the tape were evaluated using
another parser available within the AFCTB.  Because of the
errors in the DTD, it would not compiled and the Text file
was not evaluated.

The Text file and DTD from this document were evaluated
using Exoterica's *Validator exl*, Exoterica's *XGMLNormalizer*,
McAfee & McAdam's *Sema Mark-it*, and the Public Domain *sgmls*
parsers.

The DTD and Text file do not meet the CALS MIL-M-28001A
specification.

## 6.  Raster Analysis

The tape contained ten Raster files.  All ten files were
evaluated using the AFCTN *validg4* utility.   This program
reported all ten files meet the CALS MIL-R-28002A specifi-
cation.

The files were read into the AFCTN *calstb.475* viewing
utility.  No problems were noted.

The AFCTB has several tools for viewing Raster files.  These
tools are not used to generate a pass/fail but to report how
commercially available software can handle the files.  Many
of these products are used in the development of technical
publications and are good indicators of usability.  The use
of these products is not an endorsement nor an indication
of CALS capability.  All operations were performed using the
default settings.

The files were converted using ArborText's *g42tiff* utility
without a reported error.  The resulting files were read
into Island Graphics' *IslandPaint* and displayed.

The Raster files were read into Carberry's *CADLeaf* software
without a reported error and displayed.

The files were read into IDA's *IGESView* and *IGESView for Windows* without a reported error and displayed.

The files were read into Inset Systems' *HiJaak for Windows* without a reported error and displayed.

The files were converted using Inset Systems' *HiJaak for DOS* into an IMG format without a reported error.  The resulting files were read into Corel's *Ventura Publisher*, displayed and printed.

The Raster files were converted using Rosetta Technologies' *Prepare* without a reported error.  The resulting files were read into Rosetta Technologies' *Preview* and displayed.

The Raster files meet the CALS MIL-R-28002A specification.

## 7.  CGM Analysis

No Computer Graphics Metafile (CGM) files were included on this tape.

## 8. Conclusions and Recommendations

The tape submitted by Gateway Conversion Technology has no reported Document Declaration or CALS header errors. The physical structure of the tape meets the CALS MIL-STD-1840A requirements.

The Text file and DTD had multiple reported errors from all parsers available within the AFCTB. The SGML file does not meet the CALS MIL-M-28001A specification.

The Raster files meet the CALS MIL-R-28002A specification.

Because of the reported errors in the SGML file, the tape does not meet the CALS MIL-STD-1840A requirements.
